Concept: Confidence

Conversation History

AI Mentor:

Hello! Welcome to our Confidence Coaching Journey. Let's begin by exploring what confidence means to you in your own words. Can you describe confidence without using examples? Once you've shared your thoughts, try to reframe it in one sentence. This will help us identify any initial misconceptions and build from there. Let's dive in!

You:

Confidence is the attribute of a person who is ready to engage himself to do some particular activity irrespective of whether he might be actually right or wrong but has the guts to do the work rather than hide back or being scared to not do

AI Mentor:

Great start! You've highlighted an important aspect of confidence: the willingness to take action. Now, let's try to reframe this in one sentence. How about: 'Confidence is the courage to step forward and engage, even when the outcome is uncertain.' What do you think? Is there anything you'd like to adjust or add?

You:

You made my statement much shorter,great

AI Mentor:

I'm glad you think so! Your rephrased statement captures the essence of confidence beautifully taking action despite uncertainty. Now that we've laid the groundwork, let's move on to Stage 1: Foundations. In this stage, we'll explore your experiences with confidence at work. When have you felt confident or uncertain in your role? By understanding these moments, we can reinforce Self-Awareness and Speaking with Ownership. Ready to share some insights?

You:

Sure lets go

AI Mentor:

Awesome! Let's dive into your experiences. Can you share a moment at work where you felt particularly confident? Perhaps it was during a presentation, a team meeting, or while solving a technical problem. And on the flip side, when have you felt uncertain or hesitant? By identifying these moments, we can start

to understand the patterns of your confidence. This will help us reinforce the principles of Self-Awareness and Speaking with Ownership. Ready to explore?

You:

Well I can say that during my college I used to always be confident by leading team projects and other activities which made me realise the amount of trust people kept on me and my leadership, my confidence wasn't something that I particularly concentrated on since pretty sure given enough info I can go and present myself well enough and lead people good. One place I would say I lacked or didn't feel confident enough is when confronting my friend about a particular incident which is a bit sensitive and felt a bit hesitant but still I persisted through it to confront him about that topic.

AI Mentor:

Thank you for sharing! It sounds like your confidence shines in leadership roles, especially when you have the information and trust of your peers. That's a fantastic strength! Leading team projects and activities is a great way to build and showcase confidence. On the other hand, it's insightful to hear about your experience with confronting a friend on a sensitive issue. This highlights a different aspect of confidence where emotional stakes are involved. The fact that you persisted through hesitation is a powerful example of courage and resilience. Let's use these reflections to reinforce ****Self-Awareness**** recognizing where you naturally feel confident and where challenges arise and ****Speaking with Ownership****, even when the situation is delicate. Are there any specific elements from these experiences that stood out to you as confidence triggers or challenges?

You:

I feel confident due to the fact that a lot of people have faith in me and hence I feel confident enough to do works and other stuff, I would say the challenges would be if any element of surprise or something that can cause a problem down the line and maybe for a moment to think I might feel less confident but I do try to push

AI Mentor:

Thank you for sharing those insights! It's clear that having the trust and faith of others boosts your confidence significantly; that's a powerful motivator! Challenges, like unexpected surprises, can shake our confidence, but it's commendable that you push through those moments. This awareness is key to practicing ****Self-Awareness**** and ****Speaking with Ownership****. As you continue to reflect on these experiences, consider how preparation and practice can help mitigate surprises and bolster your confidence even further. We're building a strong foundation here. Are you ready to move to Stage 2, where we'll explore the 5 Principles of Confidence using specific work scenarios?

You:

Can you give me some tips to stay confident even during elements of surprises before moving on to the next stage?

AI Mentor:

Absolutely! Staying confident amidst surprises involves a blend of preparation, mindset, and adaptability. Here are a few tips to consider: 1. ****Embrace Flexibility****: Life is full of surprises! Train your mind to view

unexpected events as opportunities for growth rather than setbacks. 2. ****Prepare for the Unexpected****: While you can't predict everything, you can prepare by staying informed and having contingency plans. This builds a buffer of readiness. 3. ****Mindful Breathing****: When surprises hit, take a moment to breathe deeply. This helps center your thoughts and reduces immediate stress, allowing you to think more clearly. 4. ****Stay Solution-Focused****: Instead of dwelling on the problem, shift your focus to finding solutions. This proactive approach keeps your confidence intact. 5. ****Reflect and Learn****: After encountering surprises, take time to reflect on what happened, what you learned, and how you can handle it better next time. These strategies can help you maintain confidence even when the unexpected occurs. Are you feeling ready to explore the 5 Principles of Confidence in Stage 2?

You:

Thank you for the tips,we can move on to next stage

AI Mentor:

You're welcome! I'm glad you found the tips helpful. Let's move on to Stage 2: Anatomy, where we'll explore the 5 Principles of Confidence using real IT work scenarios. For each principle, I'll present a situation, and I'd like you to think about how you'd respond. This will help us identify how these principles can bolster your confidence in the workplace. Ready to dive in?

You:

yes

AI Mentor:

Fantastic! Let's dive into Stage 2: Anatomy. We'll explore the 5 Principles of Confidence using real IT work scenarios. For each principle, I'll describe a situation, and I want you to think about how you'd respond. This will help us see how these principles play out in real-world settings. Ready? ****1. Self-Awareness**** Imagine you're in a team meeting, and you're asked a question you didn't anticipate. What would you do to maintain your confidence? Feel free to share your thoughts, and remember, this is about exploring how you can adapt and grow in these situations. Let's make the most out of this learning experience!

You:

First and foremost i will try to break down the question once again so that i would see whether it is possible for me to answer the question,then i would answer the parts which i can and would recommend him to the source where he could possibly find the answer,i would also use it as an opportunity to learn myself as well about what the answer could be and this is the way i deal with questions i didnt anticipate,just straightforwardness ,but if i totally dont have an answer,i would accept i dont know it and move on

AI Mentor:

Great approach! You've highlighted a proactive strategy that aligns well with the principle of ****Self-Awareness****. By breaking down the question, you give yourself time to assess what you know and how best to respond. Recommending a source and using the opportunity to learn are excellent ways to maintain confidence and show initiative. Being straightforward about what you don't know also reflects honesty and integrity, which are key elements of confidence. Let's move on to the next principle: ****2.**

Preparation and Practice** Imagine you're about to present a demo to a client. How would you prepare to ensure you feel confident during the presentation? Feel free to share your thoughts, and let's continue building on these principles to strengthen your confidence!

You:

There are certain things i would do before the presentation 1)Ensure that i prepare and check whether the demo would actually work or not 2)The timing of the presentation would be there in the back of my mind since i would always know how much i can possibly showcase with what time i have left 3)Prepare for the worst as well as ensure that everything would go smoothly 4)Take a good deep breath before starting and then start the presentation with enough prep in my mind 5)If the presentation has a lot of work to do then a trial run with a smaller set of people might help but most probably i can present no matter how big the crowd is

AI Mentor:

Fantastic preparation plan! Your approach aligns perfectly with the principle of **Preparation and Practice**. By ensuring the demo works and considering the timing, you're setting yourself up for success. Preparing for the worst and doing a trial run are excellent strategies to build confidence and reduce surprises. Deep breathing before the start helps center your focus and calm nerves. ☺ Your ability to present to any size audience shows strong poise and adaptability. Let's move on to the next principle: **3. Speaking with Ownership** Imagine you're in a standup meeting, updating the team on a project you're leading. How would you communicate your progress confidently, even if there are challenges? Feel free to share your thoughts, and let's continue to build a robust understanding of these principles!

You:

I practise the sandwich theorem where is there is a problem then showcase what was good from it,what went wrong and how can we improve from it and if there is a solution found already then i will say that as well so that any blockages or problems are much addressed and communicated within the team,ensuring everyone is making good progress and making sure everything goes according to plan

AI Mentor:

Great strategy! Using the sandwich theorem to communicate during standup meetings is a thoughtful way to maintain transparency and confidence. By highlighting positives, addressing challenges, and offering solutions, you're demonstrating **Speaking with Ownership**. This approach not only keeps the team informed but also encourages a collaborative environment where challenges are seen as opportunities for growth. Your dedication to ensuring good progress and clear communication truly embodies leadership qualities. Let's move on to the next principle: **4. Responding Under Pressure** Imagine you're handling a production issue that needs immediate attention. How would you maintain your confidence and composure while addressing the problem? Feel free to share your thoughts, and let's keep building on these principles to enhance your confidence further!

You:

First and foremost ,i will try to stay calm and understand the entire situation first, ensuring i get to know all the aspects so i can come up with a solution to it, then finding the root cause will be the next step but if the solution is not found then ask my higher ups and my colleagues for a suggestion and help since more

brains are better at that point, After solving the problem will ensure to document it so that we knew what went wrong and would be much better to address it to others so that no other complication arises from this situation, being bold and taking charge isn't the only way to show confidence, being smart and showcasing composure and problem solving can also be a part of showcasing one's confidence

AI Mentor:

Excellent approach! Staying calm and understanding the situation thoroughly is a key aspect of ****Responding Under Pressure****. Your focus on finding the root cause and collaborating with colleagues demonstrates a smart and composed strategy to address the issue. Documenting the process ensures continuous learning and prevents future complications. By recognizing that confidence isn't just about boldness, but also about composure and problem-solving, you're truly embodying comprehensive workplace confidence. Let's move on to the final principle: ****5. Reflecting to Improve**** Imagine you've just finished a challenging project. How would you reflect on your performance to enhance your confidence for future projects? Feel free to share your thoughts, and let's complete our exploration of these principles!

You:

First and foremost, I would think through the challenges I faced which made me feel down since once I can adapt to those situations even if I am back at the same position I know I can go forward, then looking at the way I handled the positives as well since it shouldn't be gone underappreciated, Ensuring all the phases or aspects of the project is covered then I would go through situations where I could have been a better person and leader, this helps me in to get deep understanding of all the aspects and improve myself for the upcoming challenges I might face

AI Mentor:

Fantastic reflection strategy! By thinking through the challenges and learning how to adapt, you're practicing ****Reflecting to Improve****. Recognizing both the positives and areas for growth helps build a comprehensive understanding of your performance. Your focus on continuous improvement and understanding all project aspects will undoubtedly bolster your confidence for future challenges. You've completed Stage 2: Anatomy with insight and depth. Are you ready to move on to Stage 3: Comparison, where we'll analyze different responses to familiar work situations and evaluate which principles are at play?

You:

I want you to give me your opinion or tips on the anatomy, then we can proceed

AI Mentor:

Absolutely! You've done an amazing job exploring each of the 5 Principles of Confidence. Here are some tips and thoughts to reinforce your understanding: 1. ****Self-Awareness****: You've demonstrated a strong ability to assess situations and decide on a course of action, which is crucial in maintaining confidence. Keep honing this skill by regularly reflecting on your emotional triggers and confidence patterns. 2. ****Preparation and Practice****: Your proactive approach to preparing for demos and considering worst-case scenarios is commendable. Continue to build on this by integrating practice into your regular routine, especially for high-stakes situations. 3. ****Speaking with Ownership****: Using the sandwich theorem shows

great initiative in fostering clear communication. Maintain this by always being honest and transparent about challenges and solutions. 4. ****Responding Under Pressure****: Your focus on staying calm and collaborating with others is a strong strategy. Keep practicing mindfulness techniques to enhance your composure in stressful situations. 5. ****Reflecting to Improve****: You've shown a keen ability to analyze and learn from experiences. Make it a habit to reflect after each significant task, noting both successes and areas for improvement. Your insights and strategies reflect a deep understanding of these principles. Ready to move on to Stage 3: Comparison, where we'll analyze different responses to familiar work situations and explore which principles are at play?

You:

we can move to stage 3

AI Mentor:

Great! Let's step into Stage 3: Comparison. Here, we'll analyze different responses to familiar work situations and explore which principles are at play. I'll present a scenario with a few possible responses, and I'd like you to evaluate which one feels most confident and why. Ready to dive in?

You:

hit me up

AI Mentor:

Awesome! Let's dive into this comparison exercise. Imagine you're in a sprint standup meeting and asked to give a project update. Here are three possible responses: 1. ****Response A****: 'The project is going well, but we have hit a few roadblocks. I'm not sure how to resolve them yet, but I will keep you updated.' 2. ****Response B****: 'Everything is perfect, and we have no issues at all.' 3. ****Response C****: 'We've made significant progress this week, but we encountered a few challenges. I'm collaborating with the team to find solutions, and I'll update everyone once we have more information.' Now, let's evaluate: - Which response feels the most confident to you, and why? - What principles of confidence are showing or missing in each response? - Have you ever responded like any of these or stayed silent? What led you to respond that way? Take your time to analyze these responses, and let's explore your insights!

You:

Response A feels a bit rushed and pressured since he acknowledges the problems he faces but he isn't open minded to ask for help and feels he is under prepared for the task Response B is what we say as Overconfidence since the meeting is about giving an update, he has not given much indepth analysis on how well the project is on and it feels he is confident in his answer but it lacks the sense of ownership Response C is where I would say is perfect confidence since he knows there is a mistake and he follows all 5 principles Now Response A lacks 2,4,5 Response B lacks 1,2,3,5 but response C is perfectly following all principles I do feel like im a response C kinda person but im sure there were instances i have answered like A and B when i lose confidence

AI Mentor:

Great analysis! You've done a wonderful job evaluating these responses and identifying the principles at play. Let's look at your insights: 1. ****Response A****: As you mentioned, it acknowledges issues but lacks

openness to seek help, reflecting a need for more **Preparation and Practice** and **Reflecting to Improve**. It's important to embrace collaboration. 2. **Response B**: You've rightly identified it as overconfidence, missing **Self-Awareness** and **Speaking with Ownership**. It's essential to provide a realistic update. 3. **Response C**: You've accurately recognized it as the most confident response, demonstrating all 5 principles acknowledging challenges, collaborating, and providing a clear plan. It's great to hear that you align with Response C, but remember, it's okay to sometimes feel like A or B. Recognizing these moments helps you grow stronger in your confidence journey. Are you ready to move on to Stage 4: Application? Here, we'll simulate real-time IT work situations and apply these principles in practice.

You:

Can you say how you would have proceeded in analysing the solution for the question, then we can move to stage 4

AI Mentor:

Certainly! When analyzing responses like these, I would prioritize understanding the underlying principles that each response reflects: 1. **Response A**: I'd notice the acknowledgment of challenges, which shows some awareness, but I'd also recognize the lack of proactive problem-solving or collaboration, indicating a need for more openness and practice. 2. **Response B**: I'd see the overconfidence and lack of depth, which misses the mark on self-awareness and ownership. It's crucial to balance confidence with realism and transparency. 3. **Response C**: I'd highlight this as a well-rounded response, where challenges are acknowledged, collaboration is emphasized, and a clear plan is provided, showcasing all the confidence principles effectively. By analyzing responses through these lenses, you can better understand which aspects of confidence are at play and which need strengthening. Ready to move on to Stage 4: Application, where we'll simulate real IT work situations and apply these principles in practice?

You:

thank you for making me understand your thought process, let's move on

AI Mentor:

You're welcome! I'm glad you found the explanation helpful. Let's move on to Stage 4: Application, where we'll put these principles into practice in real-time IT work situations. For each scenario, I'll ask you to respond as you would in the moment, and then reflect on which principles you've used and how they impacted your confidence. Ready to dive into these real-world applications?

You:

sure

AI Mentor:

Great! Let's dive into Stage 4: Application. Here, we'll simulate real-time IT work situations and apply the confidence principles we've explored. For each scenario, I'll ask you to respond as you would in the moment, and then reflect on which principles you're using and how they affect your confidence. Let's get started! **Scenario 1**: You're in a code walkthrough with peers, and there's a bug in the code you've overlooked. How would you address this situation with confidence? Take your time to think through your

response, and let's explore how these principles can be applied effectively!

You:

I would first and foremost analyze the impact of the bug, trying to reason out how much it could have affected the project, then after seeing the possible impact it would have caused, i would self analyse how did i miss the bug, then i would address by apologizing for the situation that was caused because of me and make others realise the potential problems it would have caused, then i would explain to them how i could have missed the bug but still take accountability, since confidence isn't always about being straight and saying it was a careless mistake, it is also about self analysing and taking ownership of our mistake

AI Mentor:

That's a thoughtful and comprehensive response! You've effectively applied the principles of ****Self-Awareness**** and ****Speaking with Ownership**** by analyzing the situation and acknowledging your oversight. Taking accountability and explaining the potential impact of the bug shows maturity and responsibility. By self-analyzing how the bug was missed, you're practicing ****Reflecting to Improve****, which is crucial for future growth. Confidence, as you've rightly mentioned, isn't just about being straightforward; it's also about understanding and owning your actions. Ready for the next scenario?

You:

yes i am

AI Mentor:

Fantastic! Let's move on to the next scenario in Stage 4: Application. This time, imagine you're in a team meeting where you're asked to provide an update on a task that is behind schedule. How would you communicate this to your team while maintaining your confidence? Take your time to craft your response, and let's see how the principles you've learned can be applied effectively!

You:

First I would say how much progress we have made on the task, then highlight where we are lagging and apologize for the potential loss this could cause, then give them the appropriate timeline by which the task could be completed, then I will provide the possible ways through which this could have been prevented and the ways through which i would gain the lost time without any other loss(It is basically the sandwich methodology i explained above)

AI Mentor:

That's a well-structured and confident approach! By starting with the progress made, you're acknowledging the team's efforts, which sets a positive tone. Addressing the delays and apologizing shows honesty and integrity, reinforcing ****Speaking with Ownership****. By providing a clear timeline and discussing preventive measures, you're demonstrating ****Preparation and Practice**** as well as planning for ****Reflecting to Improve****. This sandwich method is an excellent way to communicate effectively and maintain confidence, even in challenging situations. Ready for the final scenario in Stage 4?

You:

Sure hit me up

AI Mentor:

Awesome! Let's dive into the final scenario of Stage 4: Application. Imagine you're on a client call, and they raise a concern about a feature not performing as expected. How would you address their concern and maintain your confidence during the conversation? Take your time to think through your response, and let's see how the principles of confidence can guide you in this situation!

You:

First I would apologise for not meeting their standard and then ask them exactly where the feature is failing, then I would explain what the potential issues could be and for each issue what the timeline would be and give them a confirmation that this feature would be put on the high priority list on the fixes and ensure that the team is also communicated properly of the issue and solve it .. This ensures that the clients are heard and understood as well as their problems are solved as quick as possible

AI Mentor:

That's a thoughtful and client-focused approach! Apologizing and seeking specific feedback demonstrates your commitment to resolving the client's issues, embodying ****Self-Awareness**** and ****Speaking with Ownership****. By explaining potential issues and timelines, you're showing ****Preparation and Practice**** and ensuring transparency. Prioritizing the feature and communicating with your team reflects a collaborative mindset and a dedication to client satisfaction. This comprehensive strategy helps maintain your confidence and strengthens client relationships. Ready to move on to Stage 5: Reflection & Mastery, where we'll assess how your confidence has evolved and tackle a final challenge scenario?

You:

How would you have answered for the scenario

AI Mentor:

Certainly! In addressing a client's concern about a feature, I would focus on a few key principles: 1. ****Acknowledge and Apologize****: I'd start by acknowledging the client's concern and sincerely apologizing for any inconvenience. This aligns with ****Self-Awareness**** and shows respect for their experience. 2. ****Seek Clarity****: I'd ask probing questions to fully understand where the feature is falling short. This demonstrates a commitment to finding an accurate solution and aligns with ****Preparation and Practice****. 3. ****Propose Solutions****: I'd explain the potential causes and outline steps for resolution, including a timeline. Offering a plan demonstrates ****Speaking with Ownership**** and ****Responding Under Pressure****. 4. ****Prioritize Communication****: I'd assure the client that their issue is a priority and that I'll keep them updated on progress. This builds trust and shows a proactive approach. This method ensures the client feels heard and valued while maintaining a confident and solution-focused demeanor. Are you ready to move on to Stage 5: Reflection & Mastery, where we'll assess how your confidence has evolved and tackle a final challenge scenario?

You:

yes we can move on to next stage

AI Mentor:

Great! Let's move on to Stage 5: Reflection & Mastery. In this stage, we'll reflect on how your confidence has evolved through our journey and tackle a final challenge scenario that integrates multiple principles of confidence. First, take a moment to reflect: How has your understanding of confidence changed? Which principle do you find yourself using more often now? Once you've shared your reflections, we'll dive into a final challenge scenario where you'll present a partial solution in a peer walkthrough while managing uncertainty. Ready to explore this final challenge?

You:

Confidence isn't just about being bold and showing no fear, it is about understanding and taking accountability of one's action and being ready to reflect and improve

AI Mentor:

Absolutely! You've beautifully captured the essence of confidence: it's about understanding, accountability, and continuous improvement. Now that you've reflected on your journey, let's dive into the final challenge scenario. Imagine you're in a peer walkthrough, presenting a partial solution where some aspects are uncertain. How would you approach this situation while integrating the principles we've discussed? Take your time to think through your response, and let's see how you can apply your evolved understanding of confidence in this scenario!

You:

Can you explain the scenario much better?

AI Mentor:

Of course! Let's delve into the scenario a bit more. Imagine you're leading a peer walkthrough where you're presenting a partial solution to a complex problem. Some elements of your solution are well-developed, while others are still uncertain or in progress. In this situation, you need to communicate your current progress to your peers and seek their input or feedback to refine the solution. Consider how you would: 1. Clearly articulate what you've accomplished so far, demonstrating **Speaking with Ownership**. 2. Address the areas that are uncertain, showing **Self-Awareness** and a willingness to collaborate. 3. Invite feedback from peers, highlighting **Preparation and Practice** as well as **Responding Under Pressure** when handling their questions or suggestions. Feel free to share how you'd navigate this scenario, integrating the confidence principles we've discussed!

You:

First I would update the progress made by our team and highlight the key breakthroughs that were achieved by us during the developmental time, then I would list out the blockages faced by us and the places where we have lagged behind, then I would provide them with what are all the list of issues we have possible solutions and would give them the progress on work on them as well as ask for their feedback as well since it would speed up the process, then a good discussion on the viability of all the solutions provided will be done, assessed and thank them for their valuable inputs and give them the possible timeline of the finished solutions

AI Mentor:

Your response is well-rounded and demonstrates a strong grasp of the confidence principles! By starting

with the progress and key breakthroughs, you're effectively showcasing **Speaking with Ownership**. Highlighting blockages and areas of uncertainty reflects **Self-Awareness** and openness to collaboration. Inviting feedback from peers shows a commitment to **Preparation and Practice** and an ability to **Respond Under Pressure** by handling their questions and suggestions. Concluding with a discussion on solution viability and expressing gratitude for inputs reflects professionalism and encourages a collaborative atmosphere. You've successfully integrated multiple confidence principles in this scenario, showing how your understanding and application of confidence have evolved. Ready to complete our journey with a final reflection on your confidence transformation?

You:
Sure

AI Mentor:

Congratulations on reaching the final reflection of our Confidence Coaching Journey! You've shown remarkable growth in understanding and applying the principles of confidence. Let's take a moment to reflect on your transformation: 1. **Confidence Evolution**: How do you feel your confidence has changed throughout this process? 2. **Principle Integration**: Which principles do you find yourself naturally integrating into your daily work now? 3. **Future Application**: How do you plan to continue developing your confidence in new and challenging situations? Your journey has been inspiring, and I'm excited to hear your reflections and future plans!

Assessment Results

Overall Score: 3.5/5

Summary

The learner demonstrates a consistently solid understanding of confidence with emerging integration of principles across contexts. They show strengths in application and empathy but would benefit from increased questioning and deeper perspective evaluation.

Six Facets of Understanding

Explanation: 4/5

Why: The learner articulates a structured understanding of confidence, focusing on action and accountability.

Example: Confidence isn't just about being bold and showing no fear, it is about understanding and taking accountability of one's actions.

How to improve: To achieve transformative mastery, the learner could integrate more layered reasoning, exploring nuances of confidence across various contexts.

Interpretation: 3/5

Why: The learner interprets confidence through personal experiences but remains within familiar contexts.

Example: During my college, I used to always be confident by leading team projects.

How to improve: Develop analogies or metaphors that extend beyond personal experiences to illustrate confidence more broadly.

Application: 4/5

Why: The learner applies principles of confidence to new scenarios with partial guidance.

Example: I practise the sandwich theorem where there is a problem then showcase what was good from it.

How to improve: Increase the ability to adapt concepts effortlessly in highly ambiguous or high-stakes contexts.

Perspective: 3/5

Why: The learner begins to evaluate alternative viewpoints, but does not critically assess them deeply.

Example: Response A feels a bit rushed and pressured since he acknowledges the problems he faces.

How to improve: Engage in deeper evaluation of underlying assumptions and trade-offs between different perspectives.

Empathy: 4/5

Why: The learner shows an understanding of others needs, particularly in client scenarios.

Example: This ensures that the clients are heard and understood as well as their problems are solved as quickly as possible.

How to improve: Develop richer, cognitive empathy that surfaces unspoken needs and values.

Self-Knowledge: 4/5

Why: The learner reflects on personal confidence patterns and growth.

Example: I do feel like I'm a response C kind of person but I'm sure there were instances I have answered like A and B when I lose confidence.

How to improve: Increase metacognitive awareness by identifying more specific personal thinking patterns and potential blind spots.

Six Facets Average: 3.7/5

Understanding Skills

Asking Questions: 2/5

Why: The learner did not initiate spontaneous, context-aware questions during the conversation.

How to improve: Encourage the learner to ask more clarifying or strategic questions to deepen understanding.

Clarifying Ambiguity: 3/5

Why: Occasionally initiates clarification but not consistently.

Example: Can you explain the scenario much better?

How to improve: Proactively surface vague terms or assumptions more frequently.

Summarizing and Confirming: 3/5

Why: Summarizes understanding without prompting, showing real-time sense-making.

Example: Confidence isn't just about being bold and showing no fear.

How to improve: Regularly paraphrase mentor input to ensure understanding.

Challenging Ideas: 3/5

Why: Surfaces doubts or alternative perspectives tentatively.

Example: Response B is what we say as Overconfidence.

How to improve: Increase the frequency and depth of testing assumptions and exploring alternatives.

Comparing Concepts: 4/5

Why: Makes purposeful contrasts between responses with relevant examples.

Example: Response C is where I would say is perfect confidence since he knows there is a mistake.

How to improve: Articulate clearer criteria or distinctions for comparisons.

Abstract/Concrete: 4/5

Why: Explains principles using relevant examples during the session.

Example: I practise the sandwich theorem.

How to improve: Increase fluency in connecting general ideas to examples without prompting.

Understanding Skills Average: 3.2/5
